1. This quiz encompasses data and content from Week 1 and 2, so we recommend reviewing that material from last week for this quiz as well. What is the highest level that the team has reached in gameclicks? (Hint: use the MAX operation in postgres).

1 / 1 point

- ☐ 10  
☒ 8  
☐ 9  
☐ 6  
☐ 7

✔ Correct

2.

1 / 1 point

How many user id's (repeats allowed) have reached the highest level as found in the previous question? (Hint: For postgres: you may either use two queries or use a sub-query).

- ☐ 98823  
☒ 51294  
☐ 106436  
☐ 67271  
☐ 122757

✔ Correct

3.

1 / 1 point

How many user id's (repeats allowed) reached the highest level in game-clicks and also clicked the highest costing price in buy-clicks? Hint: Refer to question 4 for ideas.

- ☐ 66887  
☐ 23301  
☒ 32747  
☐ 73226

✔ Correct

4. What does the following line of code do in postgres?

1 / 1 point

```
SELECT count(userid) FROM (SELECT buyclicks.userid, teamLevel, price FROM buyclicks JOIN gameclicks on buyclicks.userid = gameclicks.userid) temp  
WHERE price=3 and teamLevel=5;
```

☐

This is an invalid line of code, the subquery is not formatted properly.

☐

Displays the users who have bought items worth \$3 and have had a team with level 5.

☒

Finds the total number of user ids (repeats allowed) in buy-clicks that have bought items with prices worth \$3 and was in a team with level 5 at some point in time.

☐

Counts the users who exists between both gameclicks and buyclicks files.

✓ Correct

5.

1 / 1 point

In the MongoDB data set, what is the username of the twitter account who has a tweet\_followers\_count of exactly 8973882?

- ☒ FIFAcorn
- ☐ CreateImga
- ☐ Autocenterit
- ☐ SasSpear

✓ Correct
